Precision Oven TRPO-601

Precision Oven TRPO-601 is an inventive device with the most up-to-date PID controller system. It features a cold-rolled steel chamber device with a larger viewing window. It has a temperature range of 50 °C to 250 °C and is equipped with an independent temperature-limiting alarm, allowing this machine system to run securely. It allows for a uniform distribution of air temperatures.

Features:

The device is made up of cold-rolled steel

It is having with the most updated PID controller

It has a larger observing window having a uniform distribution of air temperature

An independent temperature-limit alarm system ensures that experiments are carried out safely

LCD intelligent programmable temperature controller

Temperature-limiting alarm system indicates the fluctuations in system

The fan motor in the EBM

Specifications :

Consumed Power	220 V 50 HZ
Dimensions	300 W
Power	±1 ?
Temperature Fluctuation	+5 ?
Temperature Range	50 ? to 250 ?
